Nook Tablet Android Hack
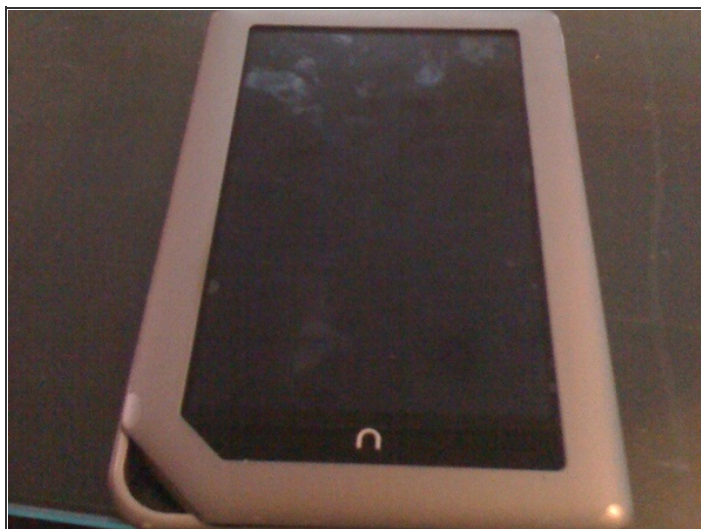

Written By: Ryan

⚙ **PARTS:**
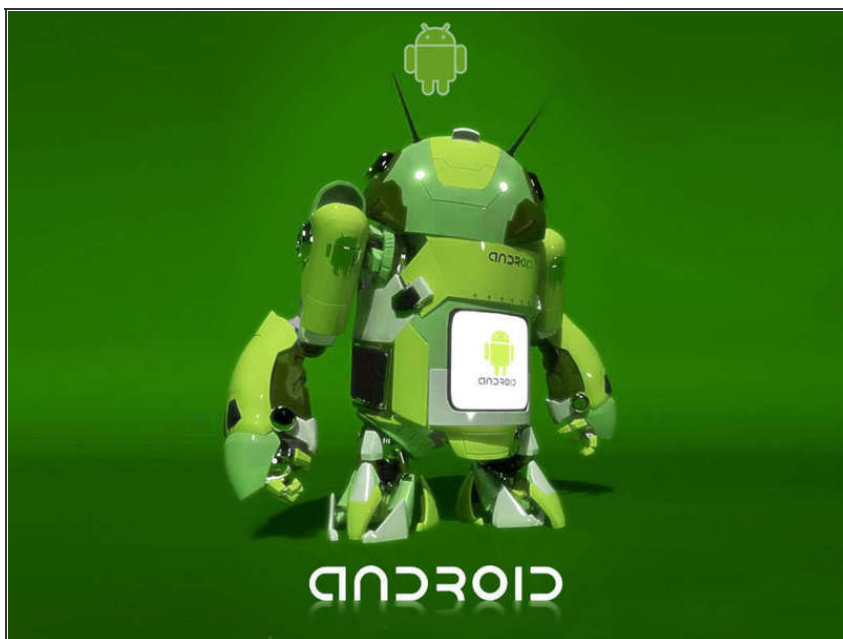

- [Nook Tablet (1)](#)

SUMMARY

This guide is for people that wish to have Android on their Nook but don't want to do any complicated rooting processes. The reason I made this is because I tried to root my Nook tablet with no results at all and it was a waste of time; rooting may work for you but may not. I hope you enjoy the simple project below. :)

Step 1 — Nook Tablet Android Hack

- First, and most important, you must own either a Nook tablet or color with 1.4.0 software.

- If you have installed 1.4.1 this mod will not work.

- If you have 1.4.1 go here, download the file and follow the steps.

Step 2

- Now go online and look up "Go Launcher free download" and find a good site. Or you can look for ADW Launcher which is for more advanced users.

- Make sure when you open it on the Nook to press "Package Installer".

- If you press "App Installer" then you will need to re-download the launcher.

Step 3

- Now just search your Nook for it and when you find it, press it and it will open and, PRESTO!! your Nook has (limited) Android capabilities!

- When you want to download an app you must go to the online Android market.

- Don't keep your wireless on when it sleeps or it'll download the 1.4.1 software and ruin all your hard work. :(

A Nook tablet with limited Android capabilities.
